

MicroLink Executive Calendar

A Single View of All Calendars from Multiple SharePoint Sites

Features Include:

- Easy deployment and installation
- Responsive, intuitive interface
- Support as needed
- User- selectable calendar colors
- Web- based

A Single View of All Calendars from multiple SharePoint sites

Microsoft SharePoint helps streamline collaboration, shared processes, content management, enterprise search, and data sharing. Whether you are working across departments, companies, or great distances, SharePoint lets you easily share information with others in your organization. MicroLink developed the Executive Calendar Web Part to make sharing your calendar easier.

MicroLink's Executive Calendar Web Part allows any user who can edit a SharePoint site to select multiple events via an intuitive navigation tree on the Web Part properties tool bar. Additionally, the MicroLink solution provides multiple calendar views (Year, Month, Day, and Hour) as well as the ability to save the calendar entries in Outlook which allows the user to synch his calendar with multiple users' calendars.

Plus, it's secure.

Any application that aggregates content from within the portal must conform to the security model provided by the platform and should not show items the user has no access to. So the Executive Calendar uses the same security guidelines that are set up when the portal is set up. However, each calendar can be customized to the requirements of the user.

And it's easy.

As the use of SharePoint increases within our customers' enterprise, it is not uncommon to require the ability to add events to multiple event lists in a single calendar view within SharePoint. So MicroLink has made the Executive Calendar intuitive and easily modified by a standard SharePoint user.

Aside from the requirement to view multiple items, many users prefer to print the calendar without the SharePoint Web Part frames and formatting commonly referred to as "Chrome". So, the Executive Calendar print view fits on a standard 8.5 x 11 sheet of paper and does not use the SharePoint display framework.

The following technologies comprise the Executive Calendar product:

- MicroLink Executive Calendar Web Part
- SharePoint 2003/2007
- Outlook
